

Amirjon Ulmasov

Brooklyn, NY | (929) 382-8602 | amirjon5321@gmail.com | amir-eta.vercel.app | linkedin.com/in/amirjon/

EDUCATION

Williams College, *Bachelor of Arts*, Williamstown, MA
Major: Statistics, Computer Science, and Arabic; GPA: 3.85/4.00

Expected: June 2028

Harvard College, *Visiting Undergraduate Student (Study Away)*, Cambridge, MA

September 2026 - June 2027

Leadership and Affiliations: QuestBridge Scholar, CodePath Fellow, MLT Career Prep Fellow

TECHNICAL EXPERIENCE

NBCUniversal, *Software Engineer Intern*

June 2026 - August 2026

- Cut QA asset turnaround by 5x by building a background Task node in BrightScript that retrieves and filters dynamic assets from an internal configuration API, eliminating hardcoded test assets from the Roku SDK.
- Triaged and resolved 10+ recurring production bugs across sprints, including a P0 defect risking live-stream accessibility for users on legacy devices. Engineered a dedicated message port with a senior engineer to filter priority traffic, cutting response time from ~20 min to ~10 sec, streamlining the incident response process.
- Built a CI pipeline to auto-generate AI-assisted documentation for every major PR and launched the team's internal docs platform, adopted team-wide to cut manual doc writing and speed up onboarding.

Williams College, *Research Assistant*

January 2026 - June 2026

- Optimized CUDA C kernels for graph algorithms on NVIDIA T4 GPU, improving kernel execution efficiency by identifying and mitigating memory bandwidth bottlenecks with Nsight profiler.
- Developed microbenchmarks comparing Pascal vs. Volta GPU architectures to quantify independent thread scheduling impact on race conditions and synchronization primitives.

Schoolbus (Early-Stage Startup), *Software Engineer*

June 2025 - Present

- Lead development of a cross-platform ride-sharing app (React Native, Bun.js, PostgreSQL on AWS), integrating Claude AI into the code review pipeline and managing a team of 4 student engineers. Institute TDD, raising code coverage from 40% to 80% and cutting post-deployment bugs by 50%.
- Build real-time matching backend with Hono framework and WebSocket connections, handling concurrent ride requests with sub-100ms API response times.

SVP Portland, *Software Engineer Intern*

June 2025 - September 2025

- Rebuilt SVP Portland's public website to align with new marketing objectives and improve navigation and accessibility, making information more discoverable for prospective partners and community members.
- Automated investor partner onboarding workflows with Salesforce + V4S dynamic forms, eliminating manual data entry for 10+ staff members.
- Shipped features in 3-week Agile sprints via Azure DevOps, completing 95% of sprint goals on time and collaborating with stakeholders to prioritize and ship improvements iteratively.

PROJECTS

JusticeMap, *Full-Stack RAG Application*

- Architected an 8-step multi-agent legal RAG pipeline with 4 specialized LLM agents (intake, research, analysis, letter generation) over a ChromaDB vector store of 18 municipal legal documents across NYC, Chicago, and LA.
- Built a FastAPI backend with TF-IDF cosine similarity grounding to verify citation accuracy and Wolfram Alpha integration for real-time city statistics; awarded 1st place at MEGA Hackathon 2026.

BrewBar Coffee, *iOS/Android Application*

- Led development of BrewBar Coffee, a full-stack ordering app built with React Native and Node.js for a local coffee shop, letting customers customize drinks, track orders, and pay securely via Stripe for fast pickup.
- Powered the backend with Firebase (auth, storage, notifications) and APIs handling orders and live updates, scaling the app to 200+ active users at the shop.

SKILLS

Languages: Java, Python, JavaScript, C, CUDA C, SQL (MySQL, PostgreSQL), BrightScript

Frameworks and Tools: React, Node.js, TensorFlow, Scikit-learn, AWS, Firebase, FastAPI, Git, Linux, ChromaDB

Concepts: CI/CD, Roofline Modeling, Distributed Systems, MLOps, NLP, RAG, GPU Optimization, Video Streaming
